

PAWPATHS

Leading dogs in the right direction

Pawpaths is a device that attaches to your dog's collar to measure the dog's activities. It is an exercise guideline based on breed, age and weight and, when synced with the app, shows you various statistics, such as time spent resting, playing and walking, as well as calories eaten and burnt. An added feature is GPS tracking should your dog be of the lead and go out of sight.

Pawpaths uses Bluetooth technology and works with iOS, Android phones and tablets.

The first screenshot shows the Home Screen with the Pawpaths logo and a Beagle icon. The second screenshot shows the Profile Page for a dog named 'CARLOS', displaying breed (Pug), gender (Male), age (4 years, 1 month), weight (9.8 kg), and activity (Walk, medium level). The third screenshot shows the Activity Page for 'CARLOS' on Wednesday, October 4th at 16:35, showing a goal of 50mins and a completion of 70%. It also displays activity data for Playing (20mins), Walking (30mins), and Resting (23hrs 10mins).

The first screenshot shows the Food Intake Page for 'CARLOS', displaying recommended and fed treats, and calorie counts of 1100 fed and 825 burnt. The second screenshot shows the Progress Page with a bar chart of daily walk times (M: 50 mins, T: 40 mins, W: 55 mins, T: 30 mins, F: 48 mins, S: 62 mins, S: 75 mins) and average walk times. The third screenshot shows the Tracker Page with a map of Hazelbank Park showing the dog's GPS location.
