

PAWPATHS

Leading dogs in the right direction

Pawpaths is a device that attaches to your dog's collar to measure the dog's activities. It is an exercise guideline based on breed, age and weight and, when synced with the app, shows you various statistics, such as time spent resting, playing and walking, as well as calories eaten and burnt. An added feature is GPS tracking should your dog be of the lead and go out of sight.

Pawpaths uses Bluetooth technology and works with iOS, Android phones and tablets.

The first screenshot shows the Home Screen with the Pawpaths logo and a Beagle icon. The second screenshot shows the Profile Page for 'CARLOS', displaying breed (Pug), gender (Male), age (4 years, 1 month), weight (9.8 kg), and activity (Walk, medium level). The third screenshot shows the Activity Page for 'CARLOS' on Wednesday, October 4th at 16:35, showing a goal of 50 mins completed at 70%, and activity data for Playing (20mins), Walking (30mins), and Resting (23hrs 10mins).

The first screenshot shows the Food Intake Page for 'CARLOS', detailing food and treat intake for the day, with totals of 1100 Calories Fed and 825 Calories Burnt. The second screenshot shows the Progress Page, which displays a bar chart of daily walk times (M: 50 mins, T: 40 mins, W: 55 mins, T: 30 mins, F: 48 mins, S: 62 mins, S: 75 mins) and average walk times. The third screenshot shows the Tracker Page, featuring a map of Hazelbank Park with a red location pin indicating the dog's current position.
